Minecraft 1.10.2 Release date: June 23, 2016
Fixes:
- Missing BlockEntity (Piston_Extension, ...).

Minecraft 1.10.1 Release date: June 22, 2016
Fixes:
- Farmland blocks now have a 15/16 block tall hitbox. (formerly a full block).
- Slight player/mob offset when on Farmland Block.
- DataWatcher / EntityMetadata ID is based on the class load order ! Can cause many issues.
- Entities from old (<= 1.5.2) worlds are killed when loaded in current versions due to a typo in the health data fixer.
- Chat key bound to unicode char causes crash in creative inventory.
- Structure Block - Keyboard navigation: Unable to navigate in the "structure name" field of structure blocks, using the arrow-keys, pos1, end or the delete key.
- Ender Dragon Does not respawn.

Minecraft 1.10 Release date: June 8, 2016
Blocks
- **Structure void**
- It is an intangible block used to indicate to the structure blocks that certain air blocks can be overridden by previously existing blocks in the destination.
- They are invisible and have a small hitbox.
- Allows for empty spaces in a structure.
- **Magma block**
- Found in the Nether, generating 4 veins per chunk between Y=27 and Y=36.
- Crafted using four magma cream.
